PROFESSIONAL SUMMARY

Senior Full Stack .NET Developer with over 4 years of experience in designing and developing scalable multi-tenant microservices using .NET 8, ASP.NET Core, and Angular. Proven expertise in Clean Architecture, Domain-Driven Design (DDD), SOLID principles, Entity Framework Core, and building high-performance RESTful APIs. Strong background in Docker, CI/CD pipelines, and delivering maintainable enterprise applications. Passionate about writing clean, well-documented code and collaborating with cross-functional teams to deliver high-quality solutions.

TECHNICAL CORE COMPETENCIES

Backend: C#, .NET 8, ASP.NET Core Web API, Entity Framework Core, Microservices Architecture, Clean Architecture, DDD, SOLID Principles, Design Patterns

Frontend: Angular, TypeScript, Responsive Web Applications, OAuth2 / OIDC / JWT / RBAC

Database: PostgreSQL, SQL Server, MongoDB, Performance Optimization

DevOps & Cloud: Docker, Kubernetes, CI/CD (Azure DevOps), Git

Other: RESTful API Design, Message Queuing, Caching Strategies, Unit Testing (NUnit/xUnit), Observability

PROFESSIONAL EXPERIENCE

Senior Software Developer

Jul 2024 – Present

WE3DS COMPANY

Tanta, Egypt

- Designed and developed scalable .NET 8 microservices and RESTful APIs following Clean Architecture, SOLID principles, and Domain-Driven Design (DDD).
- Built responsive Angular applications with TypeScript, integrating with backend services using modern authentication (OAuth2 / JWT / RBAC).
- Implemented multi-tenant architecture patterns to support multiple clients with data isolation and hierarchical role-based access control.
- Optimized database performance using Entity Framework Core, complex queries, indexing strategies, and PostgreSQL/SQL Server best practices.
- Collaborated with QA and DevOps teams to implement automated testing and CI/CD pipelines using Azure DevOps.
- Conducted code reviews and refactored legacy code to improve maintainability and scalability.

Full Stack Developer (Freelance)

Nov 2023 – Jul 2024

Cairo, Egypt

Nov 2023 – Jul 2024

- Developed high-performance backend systems using ASP.NET Core Web API and Entity Framework Core with focus on scalability and multi-tenancy.
- Built and maintained Angular frontend applications with strong TypeScript implementation and seamless API integration.
- Enhanced system throughput by 300% through advanced SQL optimization, caching strategies (Redis), and performance tuning.
- Utilized Docker for containerization and implemented CI/CD workflows for reliable deployments.
- Applied security best practices including OAuth 2.0, JWT, and RBAC for secure multi-tenant platforms.
- Worked in Agile environment, participating in all phases of SDLC from design to deployment.

STRATEGIC TECHNICAL PROJECTS

Enterprise Platform Integration

2024

- Led development of high-throughput integration layer using .NET 8 microservices and SignalR for real-time synchronization.
- Designed multi-tenant relational database schemas and implemented clean, maintainable architecture.

- Utilized Azure DevOps for version control and CI/CD processes.

Real-Time Logistics Dashboard	2023
• Built full stack solution with .NET Core backend, Angular frontend, and SignalR for real-time data processing. • Implemented efficient data access layer using Entity Framework Core and optimized PostgreSQL queries.	

EDUCATION & CREDENTIALS

B.Sc. in Computer Science	2021
<i>Higher Technological Institute (HTI)</i>	<i>Egypt</i>

Certifications: Microsoft Certified: Azure Fundamentals (AZ-900)

Languages: English (Professional Fluency), Arabic (Native)
